# Prodoscore

How Prodoscore Works

| Emails | Calendar Events | Chats | Documents |
| CRM | Telephony | Conference Calls | Screen Share |

Our bots fetch software usage statistics of your employees on products such as G Suite (Gmail, Drive, Calendar, Hangouts), conference calls and CRM (Sugar, Salesforce, Zoho), etc.

That's all they do, just collect the stats.

With the gathered data our bots compute and establish the Prodoscore for each of your employees and on the next day, you can see a report on how your team has been working.
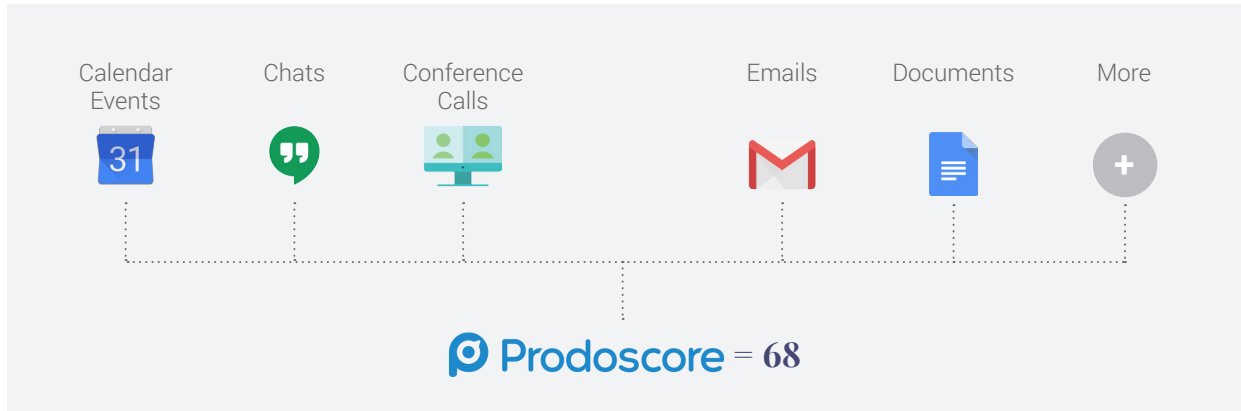

Sam Pawolenski,
Sales Executive

Let's take an example:
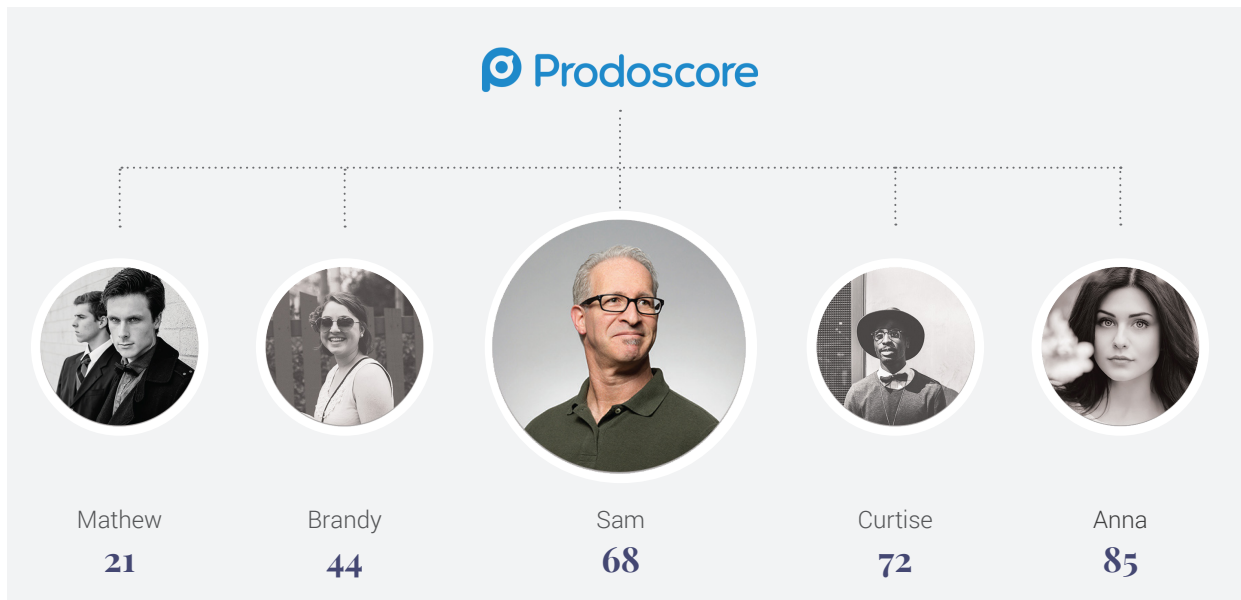

Sam is a salesperson,

He uses Gmail, Google Drive, Google Calendar, Hangouts, Conference calling, CRM systems and others related products.

Our bots record the following:
- Number of emails sent
- Document revisions
- Calendar scheduled times
- Time spent on conference calls
- All tasks related to other products that Sam uses.

Calendar Events   Chats   Conference Calls   Emails   Documents   More

Prodoscore = **68**

By weighing his daily engagement on each product throughout the organization, Sam's Prodoscore is calculated.

Prodoscore

Mathew	Brandy	Sam	Curtise	Anna
21	**44**	**68**	**72**	**85**

The calculated Prodoscore is used to generate various reports regarding Sam to measure how eective his work day was and where he stands when compared with his peers.
